1. Overview

The Service Center (PIS — Performance Intelligence System) is the comprehensive performance tracking and management module for service advisors at 800CarGuru. It tracks 22 service advisors across 60+ KPIs, automates lead distribution based on performance scores, and provides AI-driven operational intelligence.

Who uses it:

- Service Center Manager / Ops Director
- Service Advisors
- Finance (for commission tracking)
- Operations (for SLA monitoring)

Key Principle: Speed + performance = more leads. Top performers get first access. Bottom performers get restricted access. The system promotes and demotes automatically.

2. Accessing Service Center

- 1. Log into Global ERP
- 2. In the left sidebar, click **Service Center** to expand
- 3. You will see 13 modules:

- Master, Advisors, Lead Distribution, Funnel, Estimates, WIP, Collections
- AI Engines, Signals, Admin
- Advisor Extensions, Calls History, Advisor Portal

Permissions Required: `pis.dashboard.view` or `callcenter.view`

3. Master Dashboard

Path: Service Center → Master **Permission:** `pis.dashboard.view`

What you see:

- **8 KPI Cards:** Total Revenue, Team GP%, Team FOC Rate, Cars In MTD, Active WIP, Unapproved Estimates, Commission Pool, Zero Revenue count
- **FOC Critical Banner:** Red alert when FOC rate exceeds 30%
- **9-Stage Funnel:** Visual pipeline from Lead Arrives → Vehicle Pickup
- **Advisor Leaderboard:** All 22 advisors ranked by composite score with ELITE/STANDARD tier badges
- **SLA Compliance Grid:** 12 SLA measurements with OK/WARNING/BREACH status
- **AI Intelligence Sidebar:** Real-time AI signals (toggle with "AI" button)

How to use:

Date Range Filter:

1. Click preset buttons: **7D**, **30D**, **90D**, **YTD**, **1Y**, **ALL**
2. Or use the custom date pickers
3. Data refreshes automatically when dates change
4. **ALL** shows complete history (recommended for first view)

AI Intelligence Panel:

1. Click **"AI"** button in the top right of the filter bar
2. The right sidebar shows signals from 4 engines: Funnel, Agent, Revenue, Anomaly
3. Switch between **Diag.** (what's happening), **Pred.** (what will happen), **Presc.** (what to do) tabs
4. Each signal shows urgency (HIGH/MED/LOW), confidence %, diagnosis, and recommended action
5. Click "X" to close the panel

Reading the Leaderboard:

- **ELITE** (gold badge): Top performers with score ≥ 30 . Get first access to leads, higher commission
 - **STANDARD** (grey badge): Below threshold. Standard lead access, base commission
 - Revenue shown in AED (thousands)
 - "paid %" = percentage of invoices that were paid
 - "FOC %" = percentage of free-of-charge (zero revenue) jobs
-

4. Advisors

Path: Service Center → Advisors **Permission:** `pis.advisors.view`

What you see:

- Full table of all 22 service advisors
- Columns: Rank, Name, Composite Score, Conversion %, GP %, Revenue, Paid %, FOC %, SLA, Call Quality, Tier

How to use:

1. Scores are **auto-computed** every time you open the page
2. The **Composite Score** is calculated from 7 weighted metrics:
 - Conversion Rate (25%), GP% (20%), Revenue (15%), SLA (15%), Customer Satisfaction (10%), Call Quality (10%), FOC Penalty (-5%)
3. Click **"Refresh Scores"** to manually recompute
4. Advisors are sorted by composite score (highest first)

Understanding Scores:

Score Range	Tier	Meaning
≥ 30	ELITE	Top performer, gets priority leads
< 30	STANDARD	Average performer, standard lead access

5. Lead Distribution

Path: Service Center → Lead Distribution **Permission:** `pis.lead_distribution.view`

What you see:

- **Config Cards:** Tier 1/2/3 accept windows, lock duration, penalty points, max cascades
- **Live Lead Queue:** Real-time view of leads being routed (polls every 5 seconds)
- **60-Lead Simulation:** Test the routing algorithm without affecting real data
- **Queue History:** Audit trail of all routing decisions

How to use:

Live Queue:

- Automatically refreshes every 5 seconds
- Shows lead ID, status (PENDING/OFFERED/ACCEPTED/LOCKED), tier, offered-to advisor, cascade count, pipeline value
- Status colors: Blue=Offered, Green=Accepted, Purple=Locked, Red=Manual escalation

Running a Simulation:

1. Click **"Run Simulation"**
2. Watch 60 synthetic leads route through the algorithm
3. View results: Accepted, Cascaded, Manual Queue, Pipeline Value
4. Each step shows which advisor received the offer and the outcome

5. Simulation does NOT affect real data

How Lead Routing Works:

1. New lead enters → System ranks advisors by composite score
 2. Offered to #1 available advisor (ELITE first)
 3. If not accepted within window (10/7/5 min by tier) → Cascade to next + penalty
 4. After 5 cascades → Manual queue for Ops Manager
 5. Once accepted → Locked for 120 min
-

6. Funnel

Path: Service Center → Funnel **Permission:** `pis.funnel.view`

What you see:

- **Summary KPIs:** Total Leads, Invoiced, Overall Conversion, WIP Complete, Drop-off %
- **9-Stage Funnel:** Horizontal bars showing volume at each stage
- **Stage-over-Stage Conversion:** Shows conversion between adjacent stages

The 9 Stages:

1. **Lead Arrives** — New lead created in system
2. **Assigned & Accepted** — Lead has an assigned advisor
3. **First Contact** — First completed call to customer
4. **Booking Confirmed** — Customer confirmed booking
5. **Car-In** — Vehicle checked in at workshop
6. **Estimate Approved** — Estimate created and approved/invoiced
7. **WIP Complete** — Work order completed
8. **Invoice & Payment** — Invoice generated
9. **Vehicle Pickup** — Customer picked up vehicle

How to use:

1. Use **date filter** (7D/30D/90D/YTD/1Y/ALL) to select time period
 2. Conversion % shows what percentage of total leads reached each stage
 3. Green = OK ($\geq 60\%$), Amber = Warning ($\geq 30\%$), Red = Low ($< 30\%$)
 4. Check **Stage-over-Stage** section for bottleneck identification
-

7. Estimates

Path: Service Center → Estimates **Permission:** `pis.estimated.view`

What you see:

- **6 KPI Cards:** Approval Rate, Total Estimates, Approved, Rejected, Rejected Value (AED), Pending > SLA
- **Per Advisor Breakdown:** Table showing each advisor's estimate stats

How to use:

1. Review the approval rate — target is $\geq 75\%$
 2. Check "Pending > SLA" for estimates exceeding the 30-minute processing SLA
 3. Per-advisor table shows who has the most pending/rejected estimates
 4. "Invoiced" status counts as approved (legacy CarGuru2 data uses this status)
-

8. WIP (Work In Progress)

Path: Service Center → WIP **Permission:** `pis.wip.view`

What you see:

- **5 KPI Cards:** Active WIP, Capacity, On-Time %, Pickup Rate, Zero Revenue WIP
- **Zero Revenue Alert:** Banner showing advisors with completed work but no invoice
- **Per Advisor Table:** Active jobs and on-time % per advisor

How to use:

1. **Active WIP** = jobs currently in progress (not completed/cancelled)
 2. **Capacity** = number of active service center advisors
 3. **On-Time %** = percentage of jobs completed with `work_completed_at` set
 4. Check the zero-revenue alert for jobs that need invoicing
-

9. Collections

Path: Service Center → Collections **Permission:** `pis.collections.view`

What you see:

- **8 KPI Cards:** Total Revenue, Gross Profit, GP%, Collection Rate, DSO, Overdue Amount, Overdue Count, Total Cost
- **Per Advisor GP% Table:** Revenue, Cost, GP, GP%, Collected, Outstanding per advisor

How to use:

1. Use **date filter** (7D/30D/90D/YTD/1Y/ALL) to select time period
 2. **GP%** = $(\text{Revenue} - \text{Cost}) / \text{Revenue}$ — target is $\geq 45\%$
 3. **Collection Rate** = $\text{Collected} / \text{Revenue}$ — target is $\geq 95\%$
 4. **Outstanding** = invoices not yet paid
 5. Per-advisor table helps identify who has the most outstanding collections
-

10. AI Engines

Path: Service Center → AI Engines **Permission:** `pis.engines.view`

What you see:

- 7 AI engine cards, each showing generated signals

The 7 Engines:

Engine	What it does
Funnel Intelligence	Identifies conversion bottlenecks
Agent Performance	Per-advisor coaching signals
Revenue Forecasting	Predicts revenue vs target
Churn & Retention	Customer churn risk detection
Anomaly Detection	Unusual patterns and SLA breaches
Collections Intelligence	Payment and overdue optimization
Coaching Intelligence	Personalized advisor coaching plans

How to use:

1. Each card shows the engine name, signal count, and top 3 signals
2. Signals show urgency level (HIGH/MED/LOW) and type (diagnostic/predictive/prescriptive)
3. Click into a signal to see the full observation, diagnosis, and recommended action

11. Signals

Path: Service Center → Signals **Permission:** `pis.signals.view`

What you see:

- Complete signal library from all AI engines
- Filter buttons: ALL, HIGH, MED, LOW

How to use:

1. Click **HIGH** to see only critical signals that need immediate attention
2. Each signal card shows:
 - **Engine** (e.g., E1 Funnel, E2 Agent)
 - **Urgency** (HIGH/MED/LOW)
 - **Type** (diagnostic/predictive/prescriptive)
 - **Confidence** percentage
 - **Observation** — what is happening
 - **Diagnosis** — why it's happening
 - **Action** — what to do about it
 - **Owner** — who should act
 - **Response time** — how quickly to respond

12. Admin

Path: Service Center → Admin **Permission:** `pis.admin.manage`

What you see:

- 6 configuration sections with current values and edit capability

Configuration Sections:

Score Weights:

Controls the composite score formula. Values must sum to ~100.

- `conversion_rate`: 25, `gp_pct`: 20, `revenue`: 15, `sla_compliance`: 15, `customer_satisfaction`: 10, `call_quality`: 10, `foc_penalty`: -5

Tier Boundaries:

- `elite_min_score`: 30 (minimum composite score for ELITE tier)
- `standard_min_score`: 15

Commission Rates:

- `base_pct`: 3%, `performance_pct`: 5%, `top_pct`: 8%, `gp_floor_pct`: 20%, `foc_penalty_per_unit`: 500

SLA Thresholds:

- All 12 SLA targets (in minutes/hours/percentages)

Lead Distribution:

- Accept windows per tier, lock duration, penalty points, max cascades

Revenue Targets:

- `monthly_target_aed`: 2,000,000, `gp_target_pct`: 45, `foc_max_pct`: 30

How to edit:

1. Click "**Edit**" on any section
2. Modify the JSON values in the editor
3. Click "**Save**" to apply
4. Changes take effect immediately on next page load

13. Advisor Extensions

Path: Service Center → Advisor Extensions **Permission:** `pis.advisors.view`

What you see:

- Table of all Service Center Sales Department advisors
- Extension number and location fields

How to use:

1. Find the advisor in the table
2. Enter the dialer **Extension** number (e.g., 1001)
3. Select **Location**: Inhouse or Remote
4. Click "**Save**" for that row
5. Green "Saved" confirmation appears briefly

14. Calls History

Path: Service Center → Calls History **Permission:** `pis.dashboard.view`

What you see:

- **7 KPI Cards:** Total Calls, Inbound, Outbound, Completed, Missed, Avg Duration, Answer Rate
- **Direction Filter:** ALL / INBOUND / OUTBOUND
- **Call Table:** Time, Direction, Agent, From, To, Customer, Status, Duration
- **AI Signals Panel** (toggle)

How to use:

1. This shows calls **only from Service Center advisors** (not all company calls)
2. Filter by direction using the buttons
3. Click "**AI Signals**" to toggle the intelligence panel
4. Click "**Refresh**" to reload data

Key Metrics:

- **Answer Rate** $\geq 80\%$ = Good (green), $< 80\%$ = Needs attention (red)
- **Avg Duration** shows average call length for completed calls

15. Advisor Portal

Path: Service Center → Advisor Portal **Permission:** `pis.lead_distribution.view`

What you see:

- **Advisor Selector:** Dropdown to switch between advisors
- **5 KPI Cards:** Total Leads, Converted, Car-In, Total Calls, Answer Rate
- **4 Tabs:** Leads, Car-In, Customers, Calls
- **Search Bar:** Filter by name, phone, email, plate number
- **AI Coaching Panel** (toggle)

Tabs:

Leads Tab:

- All leads assigned to the selected advisor
- Shows: Customer, Phone, Status (color-coded badge), Type, Source, Created date
- Status colors: Blue=Open, Indigo=Assigned, Amber=Onboarding, Orange=In Process, Green=Completed/Won, Red=Lost

Car-In Tab:

- Filtered to leads with car_in status or check-in timestamp
- Shows: Customer, Phone, Plate Number (amber highlighted), Car Model, Status, Stage, Branch, Checked In time, Service type

Customers Tab:

- Customers assigned to this advisor (from Data Center)
- Shows: Customer name, Phone, Email, Segment, Assigned date

Calls Tab:

- Call history for this advisor
- Shows: Time, Direction (IN/OUT badge), From, To, Customer, Status, Duration

How to use:

1. **Select an advisor** from the dropdown (supervisors can view any advisor)
2. Use the **search bar** to find specific leads/customers
3. Switch between tabs to see different views
4. Click **"AI Coaching"** for AI-generated performance signals
5. Click **"Refresh"** to reload data

Quick Reference — Keyboard Shortcuts

Action	How
Switch advisor	Use dropdown at top right
Toggle AI panel	Click "AI" / "AI Coaching" / "AI Signals" button
Change date range	Click preset buttons (7D/30D/90D/YTD/1Y/ALL)
Search	Type in the search bar
Refresh data	Click "Refresh" button

Troubleshooting

Issue	Solution
-------	----------

Issue	Solution
Service Center not in sidebar	Ensure role has <code>pis.dashboard.view</code> or <code>callcenter.view</code> permission
All advisor scores are 0	Click "Refresh Scores" on the Advisors page to recompute
Leaderboard shows AED OK	Leads may not be linked to advisors. Contact admin
Funnel shows 0 at some stages	Legacy data may not have all fields (<code>checkin_at</code> , <code>gatepass</code>). New ERP data will fill these
AI panel shows "Analysing..."	Wait 30-60 seconds for AI engines to generate signals
Date filter not working	Ensure from date is before to date. Try "ALL" preset
Simulation not running	Click "Run Simulation" button. Requires at least 1 advisor with scores

CONFIDENTIAL — 800CARGURU PIS V4.0.1 — Performance Intelligence System
